TECHNICAL SKILLS

- **Languages & ML:** Python, Go, TypeScript, Ruby, PyTorch, TensorFlow, scikit-learn
- **AI & Developer Tooling:** Claude Code, Cursor, LangChain/LangGraph, agent skills, LLM evaluation, OpenAI API
- **Cloud & Infrastructure:** AWS (EC2, EKS, S3, RDS, VPC, SQS, Bedrock), Kubernetes, Docker, Terraform, Bazel, GCP
- **Backend & Data:** FastAPI, gRPC, PostgreSQL, Snowflake, BigTable, BigQuery, Redis, Datadog, Prometheus, Grafana

WORK EXPERIENCE

Cadence

Senior Software Engineer

Remote

April 2026 - Present

- Delivered a **distributed LLM task-routing service in Go** that maps free-text requests to follow-up workflows with **95%** accuracy across thousands of weekly tasks, gating model upgrades behind **labeled evals and shadow deployments**
- Launched an **idempotent, event-driven communications platform** on **AWS (EKS, SQS)**, automating **~1,500** weekly interactions and saving up to **20** operations hours per week
- Authored **agent skills and a triage playbook for the company's Slack AI agent**, wiring in tool access to **Snowflake** data and **Datadog** logs and traces; cut issues escalated to engineering by **~60%**
- Restored real coverage for **~200** Python tests across **23 Bazel** targets that had reported green without ever running, surfacing a production bug in the LLM eval pipeline

Phaidra

Software Engineer II

Remote

June 2025 - April 2026

- Created an **ML-powered commissioning CLI** that validates agent actions and data pipelines, shrinking onboarding validation from **2-4 days** to **one hour**
- Led the **simulation platform (FastAPI, React)** as technical lead, letting engineers model cooling scenarios pre-deployment
- Coordinated two **ML teams** and the **Connectivity team** to deliver AI agents optimizing datacenter cooling
- Productionized a **PyTorch reinforcement learning agent** for liquid cooling in AI data centers, reducing GPU temperature spikes by **20%**

Software Engineer

November 2023 - June 2025

- Owned the **Agent State Tracker**, an internal developer tool that became the org's **#1 most-used dashboard**, centralizing agent state and saving engineers **~5 minutes per workflow**
- Designed its core services (**Python CLI** for ML Ops, **Go** tracking service) and was selected to head the migration to a **centralized Python service**
- Architected a **Go + gRPC + PostgreSQL** pipeline processing *millions of sensor readings* to detect stale data in real time, improving ML training data quality by **15%**

Secureframe

Software Engineer

Remote

July 2022 - November 2023

- Automated third-party integrations for **security compliance** utilizing **Ruby on Rails** with **GraphQL** and **TypeScript**
- Developed internal messaging and ticketing **backend** with Slack and Jira using their public **APIs** and **PostgreSQL**, increasing sales wins over competitors by **15%**
- Drove Managed Device automation improvements powered by public APIs, improving NPS score by **10 points**
- Partnered with a cross-functional tiger team to stabilize platform infrastructure, reducing customer complaints by **40%**

HADD Machine Learning Research Group

Software Engineer Co-Lead

Remote

January 2021 - September 2022

- Developed semi-supervised tensor decomposition models using **PyTorch**, **TensorFlow**, and **NumPy** for high-dimensional scientific datasets
- Co-led a software team to construct an **open-source Python module** for multiplicative update methods with experimental errors reduced to **~5%**
- Tested packages on **raw data tensors** such as EEG videos, preprocessed and imported using **OpenCV**, **Pandas**, and **pyTaco**

EDUCATION

Georgia Institute of Technology (Online)

M.S. Computer Science, **Specialization** in Machine Learning

Expected 2028

University of California - Los Angeles (UCLA)

B.S. Mathematics of Computation, **Minor** in Statistics

2022
